(Supplier)

Purchase Order Nr. 2023-0232

According to the result of the tender for the public contract "Bright source of polarization entangled photons" we order from you the products specified in your quotation Nr. 1011601 from September 1, 2023 (your Ref: RFQ 139419), which is attached to this order.

On behalf of the Customer:

Line Lead time	OZ BC#	Customer Part # , Rev # OZ Part # Sales Description	Qty	Unit Price	Sub Total	Qty Discounts
1	NEW	BHPS-2-1-3A3A-1550-9/125 Turn-key alignment-free bright broadband source operating at room temperature. Unit generates high-quality polarization-entangled photon pairs within a narrow telecom bandwidth, centered at 1550 nm, using a type-2 waveguide while the coincidences rate can be controlled via built-in manual pump attenuator. The photon pairs are generated through Sagnac interferometric configuration and directly injected into two single-mode output fibers without using a wavelength splitter and thus with the highest coupling efficiency after passing built-in pump-noise removal filters. These ports are accessed through two FC/APC adaptors, installed on the front panel, and the photon pairs are delivered within 9/125 um single-mode fibers.	1.00	€ 35,020.80	€ 35,020.80	

Grand Total EUR 35,020.80

Best Regards,

Saidou

- **Customer Note: 1- Generic product family datasheet for Bright Polarization entangled source can be accessed at following link: https://www.ozoptics.com/ALLNEW_PDF/DTS0192.pdf. And for Polarization Entanglement Tomography Analyzer at following link: https://www.ozoptics.com/ALLNEW_PDF/DTS0196.pdf.**
2- Unit will be produced on demand and long leadtime is due to long lead-time to procure the customized optical components. Expected lead-time will be confirmed at time order is received.
3- Our Turnkey Polarization entangled sources are alignment free, no need for customer to realign.
4- Source Signal/Idler degeneracy wavelength is centered at 1550 nm.
Given the detection linearity of our single-photon detectors and the saturation level, we do not exceed a few hundreds of uW of pump power without saturating the detectors. Therefore, We are committed to: 0.9 MHz at 300 uW. Fidelity > 98% and Two-photon interference visibility > 98 % are aimed by design not measured.
5- Entangled Photon source quoted is subject to Canadian Exports rules and regulations. An Export permit may be required.
6- Price adjusted to reflect latest set price.
